

Moshi Goes All-in on USB Type-C Audio with New Headsets: Mythro C and Avanti C

Boasting better sound quality than their 3.5 mm counterparts, Moshi's new offerings are ideal for smart travelers.

San Francisco, California (Feb 5, 2019) – Moshi, the accessory design house, today has announced two new products in its expanding USB-C audio collection: [Mythro C](#), an in-ear set of headphones with lightweight aluminum housings, and Avanti C, an on-ear headset with an ergonomic headband, premium vegan leather earcups and compact carrying case.

“Working with Apple and Google on USB-C projects over the past few years has given us an engineering headstart when it comes to USB-C audio,” said Spencer Pangborn, Director of Product Marketing at Moshi. “Now that major phone makers like Apple, Google, Samsung and others are completely removing the headphone jack, it’s only a matter of time before USB-C headphones become commonplace.”

“Wireless audio solutions will remain popular, but travelers and audio aficionados alike will prefer to use wired headsets since there’s no charging required or bandwidth limitation. USB-C audio also offers superior sound quality because the analog cable runs are shorter thanks to the digital-to-analog converter (DAC) being located near the drivers.”

Moshi’s Mythro C and Avanti C are both equipped with a DAC, and offer high-resolution audio (24-bit/96 kHz) with a Class G amplifier. Mythro C, crafted from lightweight aluminum, includes 8 mm neodymium drivers for crisp highs and deep punchy bass. Avanti C features a rotatable stainless steel headband and angled earcups for added comfort. The on-ear headset is built with high-resolution 40 mm neodymium drivers for a full-bodied sound signature and excellent noise isolation. Both earphones provide noise isolation ideal for plane or train travel.

Mythro C (\$50) is available today on moshi.com, and Avanti C (\$200) will be available from mid-February.

About Moshi

Moshi designs simple, sophisticated accessories and electronics for those who refuse to sacrifice style for functionality. Founded in 2005, Moshi combines in-house design, minimalist aesthetics and our Silicon Valley roots in material sciences to create products that fit seamlessly into your life. With offices located in San Francisco, Taipei, Shanghai, Rotterdam, and Dubai, Moshi products are sold in retailers globally.
